

# FINNAIR GROUP HALF-YEAR REPORT

1 JANUARY – 30 JUNE 2021

15 July 2021

# FINNAIR GROUP HALF-YEAR REPORT

## 1 JANUARY – 30 JUNE 2021

*Cost adjustment and financing measures continued while Finnair was preparing for a traffic restart. As travel restrictions are reduced, demand is expected to increase gradually during the fall.*

### April – June 2021

- Earnings per share were -0.09 euros (-0.25)\*.
- Revenue increased by 63.0% to 111.8 million euros (68.6).
- Comparable operating result was -151.3 million euros (-174.3). Operating result was -139.1 million euros (-171.2).
- Cash funds were 834.3 million euros (31 Dec 2020: 823.7) and equity ratio was 18.9 per cent (31 Dec 2020: 24.6).
- Net cash flow from operating activities was -59.3 million euros (-463.7), and net cash flow from investing activities was 13.8 million euros (262.1).\*\*
- Number of passengers increased by 197.6% to 0.3 million (0.1).
- Available seat kilometres (ASK) increased by 311.6%.
- Passenger load factor (PLF) was 30.6% (33.1).

### January – June 2021

- Earnings per share were -0.19 euros (-0.46).
- Revenue decreased by 64.2% to 225.4 million euros (629.8).
- Comparable operating result was -294.5 million euros (-265.4). Operating result was -288.2 million euros (-266.8).
- Net cash flow from operating activities was -177.0 million euros (-597.2), and net cash flow from investing activities was 19.0 million euros (194.8).\*\*
- Number of passengers decreased by 80.0% to 0.6 million (2.8).
- ASK declined by 73.8%.
- PLF was 28.3% (71.3).

\* Unless otherwise stated, comparisons and figures in parentheses refer to the comparison period, i.e. the same period last year.

\*\* In Q2, net cash flow from investing activities includes 28.6 million euros (322.1) of redemptions in money market funds or other financial assets (maturity over three months). In H1, these decreased in net terms by 37.9 million euros (371.3). They are part of the Group's liquidity management.

## Outlook

### GUIDANCE ISSUED ON 27 APRIL 2021:

Due to the continued strict travel restrictions, the comparable operating loss in Q2 2021 will be of a similar magnitude as in four previous quarters.

In Q2 2021, Finnair continues to operate a limited network. While gradual recovery of demand is expected in Q3 2021, the visibility is weak and there are several scenarios of the timing of the recovery and, thus, the company will not provide guidance on full year revenue.

Finnair will update its outlook and guidance in connection with the Q2 2021 interim report.

#### **NEW GUIDANCE ON 15 JULY 2021:**

Travel restrictions have been lifted at a slower pace than expected and, therefore, the recovery in demand has also been delayed. We expect that demand will increase gradually during the fall 2021 as now Finland is also opening to travel. The company estimates that the monthly operating cash flow will turn positive by the end of the year 2021.

The travel restrictions will, however, continue to have a softening impact on demand especially in Asia, which is expected to open to travelers some months later than Europe. Due to the travel restrictions and incremental costs caused by the increased capacity, the comparable operating loss in Q3 2021 will be of a similar magnitude as in the five previous quarters despite the gradual increase in revenue.

As a result of the pandemic situation, inclusive of virus variants, visibility remains weak and there are several scenarios of the timing of the recovery and, thus, the company will not provide guidance on full year 2021 revenue.

Finnair will update its outlook and guidance in connection with the Q3 2021 interim report.

### **CEO Topi Manner:**

The pandemic and related travel restrictions continued to heavily impact Finnair's passenger numbers, revenue and result during the second quarter. We continued to operate a limited network, adding flights as demand evolved when European countries started to open for travel. In addition to the New York route opened in the spring, we re-introduced our services to Chicago and Los Angeles after a break of over one year.

Cargo demand remained strong due to the delivery chain challenges caused by the pandemic. We flew 522 cargo-only flights; cargo also supported adding more long-haul flights to our passenger network. Cargo continued to account for more than half of our revenue, even though passenger revenue surpassed cargo revenue again in June.

We continued our financing actions by refinancing our 200-million-euro bond, doubling its size to 400 million euros. Thanks to this transaction, we maintain a healthy balance sheet and cash reserves, and can thus focus fully on re-starting our traffic.

Our cost programme, which targets permanent cost savings from the start of the year 2022, proceeded well, and we will clearly exceed our earlier target of 170 million euros. We now target savings of up to 200 million euros measured with 2019 operational volumes. We continue to strive for cost efficiency in all our operations, which is necessary in the highly competitive post-pandemic market.

Our customer satisfaction was again at an excellent level, with a NPS of 45. In June, we introduced more choice and options for travelers to tailor their own trip, by renewing our ticket offering and introducing a totally new Business Light ticket type.

Even though travel restrictions have been lifted at a slower pace than we expected, many countries, including Finland, have now opened to travel and entry requirements are becoming more harmonised, especially for fully vaccinated travellers. We believe demand will increase gradually during the fall especially in Europe and North America, with Asian countries following some months behind. Vaccination coverage is now increasing at a good pace around the world, but the travel recovery continues to depend on the development of the pandemic situation, including virus variants, and the related travel restrictions. Although we estimate demand will gradually grow during the autumn, it will take at least until 2023 for the traffic volumes to return to the pre-pandemic levels.

Our traffic plan for the autumn and winter includes some 70 destinations. Our target is to utilise opportunities in the market and we will launch totally new long-haul flights from Stockholm to Florida and Thailand. These flights create jobs for some 270 Finns and strengthen our offering in the important Swedish market.

Despite the continued uncertainty, we head into the second half of the year with confidence, continuing the return training of our pilots and cabin crew and re-introducing services gradually. I want to extend my sincere

thanks to the entire Finnair personnel for their commitment, perseverance and collaboration during the pandemic months. Together, we wish customers a warm welcome onboard our flights.

## Business environment in Q2

Similar to the four previous quarters, the COVID-19 pandemic heavily impacted the global aviation sector, as well as Finnair's operations, in Q2 2021. Airlines the world over were forced to continue to cut capacity due to the ongoing strict travel restrictions imposed by governments and an overall lack of demand. The same applied also to Finnair, as it continued to operate a limited network. Even though Finnair is gradually increasing the number of flights, it will continue to operate a fairly limited network in Q3 2021. As the pandemic and its different variants are still present globally, and the COVID-19 vaccination coverage has not reached the targeted 70% threshold, Finnair estimates that it will only be able to increase its traffic to a greater extent starting from autumn 2021. Further, the company currently expects a return to its 2019 traffic levels, as measured in ASKs, in 2023 at the earliest.

Market capacity between Helsinki and many European destinations remained on a low level even though measured in ASKs, scheduled market capacity between origin Helsinki and Finnair's European destinations increased by 61.6 per cent (-92.1) year-on-year. Demand on European and domestic routes remained soft during the quarter due to the COVID-19-related route and frequency cancellations as well as strict travel restrictions. Direct market capacity between Finnair's Asian and European destinations increased by 102.7 per cent (-91.9) year-on-year. Due to travel restrictions caused by COVID-19, demand between Europe and Finnair's Asian destinations also remained soft during the period. Despite this, Finnair and Juneyao Air signed the agreement that enabled their Joint Business partnership to commence on 1 July 2021 as planned. The carriers will cooperate commercially on flights between Helsinki and Shanghai as well as in Chinese and European destinations. The Joint Business demonstrates Finnair's commitment to China as a strategic market.

Aurinkomatkat's foreign package holidays offering has been suspended during Q2 due to the COVID-19 pandemic and related travel restrictions and guidelines. Package holidays have been produced only for domestic destinations, which were launched as a new product in autumn 2020 and will remain in Aurinkomatkat's selection also in the future. Demand for package holidays has significantly strengthened year-on-year and quarter-on-quarter suggesting that there is customer trust and pent-up demand. Demand for traditional holiday destinations focuses mainly on the end of summer season and autumn 2021 as well as winter season 2021–2022.

The global air freight market was likewise heavily impacted by COVID-19 in Q2 as pandemic-related supply chain disruptions and resulting delivery delays continued to benefit air cargo. Also the blockage of the Suez Canal in March had a similar impact on the Q2 figures. This resulted in an exceptionally strong demand for air cargo, as the scheduled passenger traffic capacity (limiting the volume available to carry belly cargo) was down due to COVID-19. This consistently strong cargo demand enabled some markets to remain open for cargo-only operations in Q2, but Finnair was also able to operate scheduled Asian flights carrying belly cargo along with a limited number of passengers. As a result, cargo revenue increased year-on-year. Also, the total cargo load factor increased clearly compared to Q2 2020. Finnair estimates that the cargo demand will remain strong at least during Q3 2021.

The US dollar, which is the most significant expense currency for Finnair after the euro, depreciated by 8.7 per cent against the euro year-on-year. The US dollar-denominated market price of jet fuel was 140.9 per cent higher in the second quarter than in the comparison period as the price was at its lowest point during the pandemic. This increase does not fully impact Finnair's Q2 fuel costs due to its hedging policy. Finnair hedges its fuel purchases and key foreign currency items; hence, market fluctuations are not reflected directly in its result. This is demonstrated in Finnair's Q2 fuel bill which declined year-on-year despite the increased capacity and higher jet fuel price.

## Financial performance in Q2

### REVENUE IN Q2

Finnair's total revenue increased year-on-year as the COVID-19 impact was even more drastic in Q2 2020.

## Revenue by product

EUR million	Q2/2021	Q2/2020	Change %
Passenger revenue	44.9	13.7	228.5
Ancillary revenue	5.7	5.5	3.8
Cargo	61.2	49.5	23.7
Travel services	0.0	0.0	-515.7
<b>Total</b>	<b>111.8</b>	<b>68.6</b>	<b>63.0</b>

Unit revenue (RASK) decreased by 60.4 per cent and amounted to 7.89 cents (19.92). The RASK decline was mainly caused by the increase in ASKs.

## Passenger revenue and traffic data by area, Q2 2021

Traffic area	Passenger revenue			ASK		RPK		PLF	
	MEUR	Share %	Change %	Mill. km	Change %	Mill. km	Change %	%	Change %-p
Asia	10.0	22.4	-608.6	696.6	6,255.8	87.7	867.6	12.6	-70.1
North Atlantic	1.9	4.1	946.4	142.6	7,148.4	32.6	20,430.5	22.9	14.8
Europe	27.6	61.4	120.3	493.0	61.8	254.7	179.6	51.7	21.8
Domestic	8.4	18.7	235.6	86.0	218.1	59.3	335.3	68.9	18.6
Unallocated	-3.0	-6.7	-795.3						
<b>Total</b>	<b>44.9</b>	<b>100.0</b>	<b>228.5</b>	<b>1,418.2</b>	<b>311.6</b>	<b>434.3</b>	<b>281.2</b>	<b>30.6</b>	<b>-2.4</b>

Q2 capacity (ASKs)

- Asia
- North-America
- Europe
- Domestic

Q2 traffic (RPKs)

- Asia
- North-America
- Europe
- Domestic

Even though the passenger traffic figures improved year-on-year and quarter-on-quarter, the significant negative impact of the COVID-19 pandemic and related travel restrictions was still clearly visible in the figures. Passenger revenue increased by 228.5 per cent and traffic capacity, measured in Available Seat Kilometres (ASK), increased by 311.6 per cent overall against the comparison period. The number of passengers increased by 197.6 per cent to 291,600 passengers. Traffic measured in Revenue Passenger Kilometres (RPK) increased by 281.2 per cent but the passenger load factor (PLF) declined by 2.4 percentage points to 30.6 per cent.

In Asian traffic, the number of scheduled passenger flights was still limited but nevertheless clearly more than in the comparison period and, therefore, ASKs and RPKs surged. PLF declined by 70.1 percentage points to 12.6 per cent causing low yields but it was supported by the strong cargo operations and a very high cargo load factor.

In addition to the scheduled passenger flights to New York operated since March, Chicago and Los Angeles routes were re-opened in June. As only a single North Atlantic scheduled passenger flight was operated in the comparison period, ASKs and RPKs surged in North Atlantic traffic year-on-year. The PLF increased by 14.8 percentage points to 22.9 per cent.

ASKs grew by 61.8 per cent, RPKs by 179.6 per cent and the PLF by 21.8 percentage points to 51.7 per cent in European traffic.

Domestic traffic capacity increased by 218.1 per cent, RPKs by 335.3 per cent and the PLF by 18.6 percentage points to 68.9 per cent.

Ancillary revenue increased by 3.8 per cent. Frequent flyer program related revenue and excess baggage were the largest ancillary categories.

The impact of the COVID-19 pandemic was also visible in Finnair's Q2 cargo volumes due to the limited number of scheduled passenger flights even though the impact was even greater in the comparison period. Thus, available scheduled cargo tonne kilometres increased by 2,433.0 per cent year-on-year, whereas revenue scheduled cargo tonne kilometres increased by 4,700.5 per cent. However, cargo-related available tonne kilometres increased only by 98.8 per cent and revenue tonne kilometres increased by 116.3 per cent as they both include the cargo-only flights, which were operated mainly between Europe and Asia as well as Europe and North America. Finnair was also able to continue operating scheduled Asian passenger flights carrying belly cargo despite their low PLF as these flights had excellent cargo load factors due to continued strong cargo demand. As a result, cargo revenue increased by 23.7 per cent year-on-year.

Package holidays' financial development has been significantly affected by the COVID-19 pandemic and the related travel restrictions and guidelines. During Q2, only a limited number of domestic package holidays was produced. During the comparison period, all travel services package holiday production were cancelled.

#### OPERATING EXPENSES INCLUDED IN COMPARABLE EBIT IN Q2

Finnair's operating expenses included in comparable operating result increased by 6.8 per cent mainly due to the increased capacity. Finnair continued its significant cost adjustment initiatives in Q2, including temporary layoffs.

Unit cost (CASK) decreased by 73.7 per cent and totalled 18.55 cents (70.50). CASK excluding fuel also decreased by 73.1 per cent. The sharp decrease was mainly caused by the increased capacity year-on-year.

#### Q2 operating expenses (€270.9 million in total) included in comparable operating result

EUR million	Q2/2021	Q2/2020	Change %
Staff and other crew related costs	53.9	48.1	11.9
Fuel costs	30.8	33.2	-7.3
Capacity rents	15.0	17.8	-15.5
Aircraft materials and overhaul	19.5	19.5	-0.1
Traffic charges	19.0	11.8	60.7
Sales, marketing and distribution costs	6.0	-7.8	176.2
Passenger and handling costs	22.5	17.7	27.4
Property, IT and other expenses	23.0	28.4	-19.0
Depreciation and impairment	81.2	85.1	-4.5
<b>Total</b>	<b>270.9</b>	<b>253.8</b>	<b>6.8</b>

Operating expenses included in comparable operating result excluding fuel increased by 8.9 per cent.

Fuel costs, including hedging results and emissions trading costs, decreased despite the increased capacity (measured in ASK) and higher jet fuel price as the company was over-hedged in the comparison period and, at the same time, the market price of fuel collapsed. Fuel efficiency (as measured in fuel consumption per ASK) improved by 59.7 per cent due to e.g. relatively fewer cargo-only flights in Q2 2021 not generating ASKs. Fuel consumption per RTK, which also accounts for developments in both passenger and cargo load factors, decreased by 29.9 per cent year-on-year.

Staff and other crew related costs increased slightly due to the added capacity even though Finnair continued the COVID-19-related temporary and permanent layoffs in Q2.

Passenger and handling costs (including also tour operation expenses related to e.g. hotels) were driven up by the increased volumes especially in passenger traffic. Sales, marketing and distribution costs remained at a low level due to low marketing activities and limited sales intake.

Aircraft materials and overhaul costs as well as depreciation and impairment costs remained at the same level as in the comparison period. Traffic charges increased due to the traffic increase.

Capacity rents, covering purchased traffic from Norra and any wet leases or potential cargo rents, declined from the comparison period due to renegotiated agreements with Norra. The same applied to property, IT and other expenses as notable cost savings were achieved.

## RESULT IN Q2

Finnair's Q2 result was heavily impacted by the COVID-19 pandemic due to extensive route and frequency cancellations caused by travel restrictions in many countries worldwide.

EUR million	Q2/2021	Q2/2020	Change %
<b>Comparable EBITDA</b>	<b>-70.0</b>	<b>-89.2</b>	<b>21.5</b>
Depreciation and impairment	-81.2	-85.1	4.5
<b>Comparable operating result</b>	<b>-151.3</b>	<b>-174.3</b>	<b>13.2</b>
Items affecting comparability	12.1	3.1	>200
<b>Operating result</b>	<b>-139.1</b>	<b>-171.2</b>	<b>18.7</b>
Financial income	7.4	15.3	-51.5
Financial expenses	-27.1	-61.4	55.9
Exchange gains and losses	8.6	2.1	>200
<b>Result before taxes</b>	<b>-150.2</b>	<b>-215.1</b>	<b>30.2</b>
Income taxes	30.0	43.0	-30.2
<b>Result for the period</b>	<b>-120.1</b>	<b>-172.1</b>	<b>30.2</b>

As revenue increased more than operating expenses, Finnair's comparable EBITDA and comparable operating result both improved year-on-year.

Unrealised changes in foreign currencies of fleet overhaul provisions were 1.9 million euros (3.3) due to slightly weakened US dollar and fair value changes of derivatives where hedge accounting is not applied totalled -0.1 million euros (0.0). Exceptional changes in defined benefit pension plans totalled 12.9 million euros (none in the comparison period) and they related to terms amendments in the Finnair pension fund relating to curtailment of occupational disability pensions. Other items affecting comparability consisting of sales gains or losses and restructuring costs totalled -2.6 million euros (-0.1) during the quarter.

Net of financial income and expenses as well as exchange gains (mainly related to USD denominated aircraft lease payments and liabilities) declined significantly especially due to lower financial expenses which in the comparison period related mainly to reclassified jet fuel and foreign exchange hedges from the other comprehensive income to the profit and loss. Thus, Finnair's result before taxes and result after taxes improved significantly from the comparison period.

# Financial performance in H1

## REVENUE IN H1

Finnair's total revenue decreased significantly from the comparison period due to the COVID-19 impact.

### Revenue by product

EUR million	H1/2021	H1/2020	Change %
Passenger revenue	88.1	437.0	-79.8
Ancillary revenue	14.3	48.3	-70.5
Cargo	122.2	86.2	41.8
Travel services	0.9	58.3	-98.5
<b>Total</b>	<b>225.4</b>	<b>629.8</b>	<b>-64.2</b>

Unit revenue (RASK) increased by 36.8 per cent and amounted to 8.60 cents (6.29). The RASK increase was caused by the decline in ASKs due to the COVID-19 pandemic; therefore, the cargo revenue - which did not generate any ASKs - had an outsize contribution to the increase.

### Passenger revenue and traffic data by area, H1 2021

Traffic area	Passenger revenue			ASK		RPK		PLF	
	MEUR	Share %	Change %	Mill. km	Change %	Mill. km	Change %	%	Change %-p
Asia	16.7	19.0	-90.1	1,360.8	-71.0	155.6	-95.7	11.4	-64.9
North Atlantic	2.1	2.3	-92.3	159.9	-81.2	33.6	-94.8	21.0	-55.2
Europe	51.8	58.8	-72.2	854.1	-78.0	402.1	-84.2	47.1	-18.7
Domestic	21.0	23.9	-55.6	244.9	-59.7	149.5	-59.2	61.1	0.8
Unallocated	-3.5	-4.0	-146.6						
<b>Total</b>	<b>88.1</b>	<b>100.0</b>	<b>-79.8</b>	<b>2,619.7</b>	<b>-73.8</b>	<b>740.8</b>	<b>-89.6</b>	<b>28.3</b>	<b>-43.0</b>

H1 capacity (ASKs)

- Asia
- North-America
- Europe
- Domestic

H1 traffic (RPKs)

- Asia
- North-America
- Europe
- Domestic

The COVID-19 pandemic and related travel restrictions had a significant negative impact on all H1 passenger traffic figures as the pandemic impact was more drastic only since the end of Q1 2020. Passenger revenue decreased by 79.8 per cent and traffic capacity, measured in Available Seat Kilometres (ASK), declined by 73.8 per cent overall against the comparison period. The number of passengers decreased by 80.0 per cent to 550,800 passengers. Traffic measured in Revenue Passenger Kilometres (RPK) decreased by 89.6 per cent and the passenger load factor (PLF) by 43.0 percentage points to 28.3 per cent.

In Asian traffic, the number of scheduled passenger flights was limited in H1. As a result, ASKs were down by 71.0 per cent and RPKs by 95.7 per cent. PLF declined by 64.9 percentage points to 11.4 per cent causing low yields but was supported by the strong cargo operations and a very high cargo load factor.

As the first North Atlantic passenger flights since June 2020 were operated only in March and solely to New York, capacity in North Atlantic traffic decreased by 81.2 per cent year-on-year despite the re-opened Chicago and Los Angeles routes commencing in June 2021. RPKs decreased by 94.8 per cent and the PLF by 55.2 percentage points to 21.0 per cent.

ASKs fell by 78.0 per cent, RPKs by 84.2 per cent and the PLF by 18.7 percentage points to 47.1 per cent in European traffic.

Domestic traffic capacity decreased by 59.7 per cent and RPKs by 59.2 per cent whereas the PLF increased by 0.8 percentage points to 61.1 per cent.

Ancillary revenue decreased by 70.5 per cent due to the COVID-19 impact. Frequent flyer program related revenue and excess baggage were the largest ancillary categories.

The impact of the COVID-19 pandemic was also visible in Finnair's H1 cargo volumes due to the limited number of scheduled passenger flights. Available scheduled cargo tonne kilometres decreased by 60.8 per cent, whereas revenue scheduled cargo tonne kilometres decreased by 38.2 per cent. However, cargo-related available tonne kilometres decreased by 20.3 per cent but revenue tonne kilometres increased by 14.1 per cent as they both include the cargo-only flights, which were operated mainly between Europe and Asia as well as Europe and North America. Finnair was also able to continue operating scheduled Asian passenger flights carrying belly cargo despite their low PLF as these flights had excellent cargo load factors due to continued strong cargo demand. As a result, cargo revenue increased by as much as 41.8 per cent year-on-year with March being a record month measured in revenue.

Package holidays' financial development has been significantly affected by the COVID-19 pandemic and the related travel restrictions and guidelines. During H1, only domestic destinations were in production. The total number of Travel Services passengers declined by 96.3 per cent and the load factor in Aurinkomatkat's allotment-based capacity was 97.9 per cent. Travel Services revenue decreased by 98.5 per cent.

## OPERATING EXPENSES INCLUDED IN COMPARABLE EBIT IN H1

Finnair's operating expenses included in comparable operating result decreased by 41.7 per cent, which is less than the decline in revenue, due primarily to fixed cost items such as e.g. depreciation and impairment, which were at the same level as during the comparison period. Finnair continued its significant cost adjustment initiatives in H1, including temporary layoffs, which were visible in the significant decline in operating expenses.

Unit cost (CASK) increased by 122.0 per cent and totalled 19.85 cents (8.94). CASK excluding fuel also increased by 144.2 per cent. The surges were caused by the limited capacity and certain fixed cost items.

### H1 operating expenses (€536.6 million in total) included in comparable operating result

EUR million	H1/2021	H1/2020	Change %
Staff and other crew related costs	106.4	184.3	-42.2
Fuel costs	61.2	177.1	-65.5
Capacity rents	30.2	47.7	-36.7
Aircraft materials and overhaul	34.2	59.7	-42.7
Traffic charges	39.9	76.4	-47.7
Sales, marketing and distribution costs	10.1	22.6	-55.4
Passenger and handling costs	46.3	122.4	-62.2
Property, IT and other expenses	44.7	62.5	-28.5
Depreciation and impairment	163.6	167.6	-2.4
<b>Total</b>	<b>536.6</b>	<b>920.1</b>	<b>-41.7</b>

Operating expenses included in comparable operating result excluding fuel decreased by 36.0 per cent.

Fuel costs, including hedging results and emissions trading costs, decreased almost in line with capacity (measured in ASK) although the cargo-only flights commenced in Q2 2020 increased fuel consumption whereas they do not generate ASKs. Fuel efficiency (as measured in fuel consumption per ASK) weakened by 63.6 per cent due to the same reason. Fuel consumption per RTK, which also accounts for developments in both passenger and cargo load factors, increased by 6.0 per cent due to low passenger load factors in H1 2021.

Staff and other crew related costs decreased as capacity was significantly down and, therefore, Finnair continued the COVID-19-related temporary and permanent layoffs in H1.

Passenger and handling costs (including also tour operation expenses related to e.g. hotels) were driven down by the volume decline especially in passenger traffic. Sales, marketing and distribution costs were at a very low level due to low marketing activities and limited sales intake.

Aircraft materials and overhaul costs decreased due to the decline in capacity and updated USD-based discount rates of maintenance reserves. On the other hand, certain cost items were fixed. Depreciation and impairment costs remained at the same level as in the comparison period. Traffic charges decreased less than the traffic decline, as the traffic mix was structurally different due to the relatively increased wide-body operations caused by cargo-only flights, which led to additional costs.

Capacity rents, covering purchased traffic from Norra and any wet leases or potential cargo rents, were somewhat closer to the comparison period's level due to Norra's significant operations. The same applied to property, IT and other expenses; they mainly consist of fixed costs, even though notable cost savings were achieved.

## RESULT IN H1

Finnair's H1 result was heavily impacted by the COVID-19 pandemic due to extensive route and frequency cancellations caused by travel restrictions in many countries worldwide.

EUR million	H1/2021	H1/2020	Change %
<b>Comparable EBITDA</b>	<b>-130.9</b>	<b>-97.8</b>	<b>-33.9</b>
Depreciation and impairment	-163.6	-167.6	2.4
<b>Comparable operating result</b>	<b>-294.5</b>	<b>-265.4</b>	<b>-11.0</b>
Items affecting comparability	6.3	-1.4	>200
<b>Operating result</b>	<b>-288.2</b>	<b>-266.8</b>	<b>-8.0</b>
Financial income	12.4	24.6	-49.5
Financial expenses	-55.6	-150.3	63.0
Exchange gains and losses	-0.5	-0.8	44.3
<b>Result before taxes</b>	<b>-331.9</b>	<b>-393.3</b>	<b>15.6</b>
Income taxes	66.4	78.7	-15.6
<b>Result for the period</b>	<b>-265.5</b>	<b>-314.6</b>	<b>15.6</b>

As operating expenses did not decline in line with revenue, mainly due to fixed costs, Finnair's comparable EBITDA and comparable operating result both decreased year-on-year.

Unrealised changes in foreign currencies of fleet overhaul provisions were -4.4 million euros (-0.5) due to strengthening US dollar and fair value changes of derivatives where hedge accounting is not applied totalled 0.0 million euros (-0.2). Exceptional changes in defined benefit pension plans booked as items affecting comparability totalled 12.9 million euros (none in the comparison period) and they related to terms amendments in the Finnair pension fund relating to curtailment of occupational disability pensions. Other items affecting

comparability consisting of sales gains or losses and restructuring costs totalled -2.2 million euros (-0.8) during the quarter.

Net of financial income and expenses as well as exchange gains (mainly related to USD denominated aircraft lease payments and liabilities) declined significantly especially due to lower financial expenses which in the comparison period related mainly to reclassified jet fuel and foreign exchange hedges from the other comprehensive income to the profit and loss. Thus, Finnair's result before taxes and result after taxes improved year-on-year.

## Financial position and capital expenditure

### BALANCE SHEET

The Group's balance sheet totalled 3,618.9 million euros at the end of June (31 Dec 2020: 3,646.5). Fleet book value decreased 92.8 million euros mainly due to depreciation. The right-of-use fleet decreased by 59.0 million euros similarly due to depreciation. Receivables related to revenue decreased to 53.8 million euros (31 Dec 2020: 57.5). Net deferred tax assets increased to 137.7 million euros (31 Dec 2020: 84.8) resulting from estimated tax losses caused by the COVID-19 impact on Finnair's result. The pension assets rose to 69.8 million euros (31 Dec 2020: 31.8) mainly due to actuarial gains and curtailment of the occupational disability pensions whereas pension obligations remained at the same level and were 2.0 million euros (31 Dec 2020: 1.5).

Deferred income and advances received increased to 171.8 million euros (31 Dec 2020: 133.6). This was mainly caused by an increase in the unflown ticket liability amounting to 92.3 million euros (31 Dec 2020: 55.7) due to improved sales intake.

The loss for the period decreased shareholders' equity. Shareholders' equity also includes a fair value reserve that is affected by changes in the fair values of jet fuel and currency derivatives used for hedging as well as actuarial gains and losses related to pilots' defined benefit plans according to IAS 19. The value of the item at the end of June was 11.9 million euros after deferred taxes (31 Dec 2020: -41.8) as the increase in the fair value of hedge instruments had an increasing effect on equity especially due to the increase in the jet fuel price and actuarial gains from defined benefit pension plans.

Shareholders' equity totalled 684.8 million euros (31 Dec 2020: 896.6), or 0.49 euros per share (31 Dec 2020: 0.64).

### CASH FLOW AND FINANCIAL POSITION

#### Cash flow

EUR million	H1/2021	H1/2020
Net cash flow from operating activities	-177.0	-597.2
Net cash flow from investing activities	19.0	194.8
Net cash flow from financing activities	200.0	670.6

In H1, the COVID-19 impact was clearly visible in net cash flow from operating activities, which remained negative due the negative result for the period, lease and loan interest costs as well as payments related to unwound fuel and foreign exchange hedges. Net cash flow from investments remained positive mainly due to changes in other current financial assets (maturity over three months) and significantly lower fleet investments. Net cash flow from financing was positive due to c. 400-million-euro proceeds from the new unsecured senior bond issued in May and maturing in May 2025. On the other hand, approximately half of the old 200-million-euro unsecured senior bond was redeemed, which had a negative impact on the net cash flow from financing, and the other half will be repaid in March 2022 when it matures.

#### Capital structure

%	30 Jun 2021	31 Dec 2020
Equity ratio	18.9	24.6
Gearing	231.8	153.2

The equity ratio on 30 June 2021 decreased from the year-end 2020 due to the negative result for the period even though the positive change in the hedging reserve and other comprehensive income alleviated the impact. Gearing, on the contrary, rose as interest-bearing net debt increased and equity weakened.

## Liquidity and net debt

EUR million	30 Jun 2021	31 Dec 2020
Cash funds	834.3	823.7
Adjusted interest-bearing liabilities	2,421.5	2,197.5
<b>Interest-bearing net debt</b>	<b>1,587.2</b>	<b>1,373.8</b>

The company's liquidity remained strong during the period under review. Despite the negative net cash flow from operating activities, Finnair Group's cash funds increased mainly due to the new unsecured senior bond of c. 400 million euros although it was netted by the partial redemption of the old unsecured senior bond.

Finnair and the State of Finland signed an agreement on an unsecured hybrid loan of up to 400 million euros in Q1. Of this credit limit, approximately 350 million euros can be used by Finnair based on the state aid decision made by the EU Commission in March. Finnair can access the funds, if its cash or equity position would drop below the limits defined in the facility agreement's terms and conditions. The remaining approximately 50-million-euro share will be brought for approval by the EU Commission at a later stage. In addition to the currently fully undrawn 175-million-euro revolving credit facility<sup>1</sup> maturing in January 2023 (which would be available once the EU Commission's approval for the remaining 50 million euros of the hybrid loan is received), Finnair still has a 200-million-euro short-term, unsecured commercial paper programme, which was unused at the end of June.

Adjusted interest-bearing liabilities increased from 2020 year-end mainly due to the new senior unsecured bond. The share of lease liabilities amounted to 982.7 million euros (31 Dec 2020: 1,016.2). Interest-bearing net debt increased from the end of 2020 mainly due to the negative net cash flow from operating activities but also due to the strengthened US dollar.

## CAPITAL EXPENDITURE

Gross capital expenditure, excluding advance payments, totalled 17.8 million euros in H1 (203.8) and was primarily related to fleet investments.

Cash flow from investments (including fixed asset investments and divestments, sublease payments received and advance payments) totalled -18.9 million euros (-176.5).

Change in other current financial assets (maturity over three months) totalled 37.9 million euros (371.3) also forming a part of the net cash flow from investments, which amounted to 19.0 million euros (194.8).

Cash flow from investments (including only fixed asset investments and advance payments) for the financial year 2021 relates mainly to fleet and is expected to total approximately -119 million euros. Investment cash flow includes both committed investments as well as estimates for planned, but not yet committed, investments.

The company has 38 unencumbered aircraft, which account for approximately 46.5 per cent of the balance sheet value of the entire fleet of 2,061.0 million euros.<sup>2</sup>

## Fleet

### FINNAIR'S OPERATING FLEET

Finnair's fleet is managed by Finnair Aircraft Finance Oy, a wholly-owned subsidiary of Finnair. At the end of the second quarter, Finnair itself had 59 aircraft, of which 24 were wide-body and 35 narrow-body aircraft. Of these aircraft, 30 were owned by Finnair Aircraft Finance Oy and 29 were leased.

At the end of the second quarter, the average age of the fleet operated by Finnair was 11.1 years.

<sup>1</sup> The revolving credit facility's financial covenant is based on cash funds and equity levels. The covenant would be breached if Finnair's cash funds or equity fell below 400 million euros or if equity excluding any hybrid instruments fell below 150 million euros.

<sup>2</sup> Fleet value includes right of use assets as well as prepayments of future aircraft deliveries.

Fleet operated by Finnair*	Seats	#	Change from 31.12.2020	Own**	Leased	Average age 30.6.2021	Ordered
<b>Narrow-body fleet</b>							
Airbus A319	144	6		5	1	19.6	
Airbus A320	174	10		8	2	18.9	
Airbus A321	209	19		4	15	10.1	
<b>Wide-body fleet</b>							
Airbus A330	289/263	8		4	4	11.7	
Airbus A350	297/336	16		9	7	3.9	3
<b>Total</b>		<b>59</b>	<b>0</b>	<b>30</b>	<b>29</b>	<b>11.1</b>	<b>3</b>

\* Finnair's Air Operator Certificate (AOC).

\*\* Includes JOLCO-financed (Japanese Operating Lease with Call Option) A350 aircraft.

## FLEET RENEWAL

At the end of the second quarter, Finnair had sixteen A350 aircraft, which have been delivered between 2015–2020 and three A350 aircraft on order from Airbus of which the next delivery has been financed with a lease. These aircraft are scheduled to be delivered to Finnair in Q2 2022, Q4 2024 and Q1 2025.

Finnair's investment commitments for property, plant and equipment, totalling 349.4 million euros, include the upcoming investments in the wide-body fleet.

Finnair has the possibility to adjust the size of its fleet in line with demand forecasts through the staggered maturities of its lease agreements and changes in the number of owned aircraft.

## FLEET OPERATED BY NORRA (PURCHASED TRAFFIC)

Nordic Regional Airlines (Norra) operates a fleet of 24 aircraft for Finnair on a contract flying basis. All of the aircraft operated by Norra are leased from Finnair Aircraft Finance Oy.

Fleet operated by Norra*	Seats	#	Change from 31.12.2020	Own**	Leased	Average age 30.6.2021	Ordered
ATR	68-70	12		6	6	11.9	
Embraer E190	100	12		9	3	13.0	
<b>Total</b>		<b>24</b>	<b>0</b>	<b>15</b>	<b>9</b>	<b>12.5</b>	

\* Nordic Regional Airlines Oy's Air Operator Certificate (AOC).

## Strategy implementation

Finnair is targeting sustainable, profitable growth. The company implements its updated strategy for the period of 2020–2025 in five focus areas, namely: Network and fleet, Operational excellence, Modern premium airline, Sustainability, as well as Culture and ways of working.

Due to the COVID-19 impact, the company has decided to reassess its strategy. Though the foundation is still valid - for example, Finnair is still fully committed to Asian megacities, transfer traffic between Asia and Europe and its sustainability targets - the focus areas related to growth, network and fleet investments and their schedules, as well as long-term financial targets will be re-evaluated in the autumn of 2021 as a result of the impact on demand caused by the COVID-19 pandemic. The company estimates that it will take at least 2 years to return to the path of sustainable, profitable growth.

## NETWORK AND FLEET

Exclusive of the COVID-19 impact, Finnair is targeting Asian market level growth focusing primarily on the most profitable Asian mega cities and transfer traffic. The previously expected annual capacity growth between 3–5% was in line with the anticipated market growth. However, the development of the capacity growth rate will be reassessed due to the negative COVID-19 impact on demand for global air travel.

Finnair continues to leverage its home hub's unique geographical location, maximizing its efficiencies. Currently committed aircraft investments will be made, though Finnair was able to postpone deliveries of the three remaining A350 aircraft. The time horizon of the remaining fleet investment plan (including the narrow-body fleet renewal) will, however, be reassessed. The company will in particular follow the rapidly evolving aircraft market when it plans its future fleet investments.

## **OPERATIONAL EXCELLENCE**

Finnair is recognised as one of the world's safest airlines. The strong safety culture (including health and safety measures), as well as the reliability and productivity of Finnair's operations, continues to be at the core of the company's strategy which has been emphasised especially during the COVID-19 pandemic. In the future, more effort will be put into technology, automation and utilising data as well as into working together cross-functionally.

Particular focus will be on fuel efficiency and on-time performance, which have a significant impact on both cost and productivity as well as customer experience. In terms of on-time performance and fuel efficiency, Finnair aims to develop from being in line with peers to being among the leaders. The company's on-time performance in Q2 was excellent at 91.6% (96.4).

In April 2021, Finnair announced that it was targeting a c. 170-million-euro permanent cost base decline by 2022, compared to 2019 levels. Finnair seeks savings in such areas as real estate, aircraft leasing, IT, sales and distribution and administration as well as employee compensation structures. The company will further continue streamlining its operations and the digitalisation and automation of its customer processes. The company will also renegotiate its supplier and partner agreements. In addition, it carried out staff co-operation negotiations in H2 2020 due to the COVID-19 impact, which resulted in a reduction of approximately 600 employees globally. Also, permanent and temporary layoffs were continued. The cost savings programme progressed well in Q2 and the company announced after the period that it targets permanent, annual cost savings of c. 200 million euros by 2022, based on 2019 operational volumes. Finnair will not report on the programme's progress anymore, but it will continue to seek savings from all cost categories.

The company is preparing for a recovery in traffic and demand with different scenarios. In Q2, it continued the pilots' and cabin crew's eligibility trainings. With the help of these preparations, the company aims to ensure that the gradual increase in traffic will be smooth once the demand strengthens.

## **MODERN PREMIUM AIRLINE**

Finnair aims to be defined as a modern, premium airline. This will be achieved by allowing the customers to tailor the way they want to travel and by enabling a smooth travel experience with the help of digital services.

To win in the competitive airline market, Finnair must also excel in everyday customer experience. Finnair's Net Promoter Score (NPS), measuring customer satisfaction, was at an excellent level with a score of 45 (39) in Q2. The customers have especially appreciated Finnair's service and extensive health and safety measures during the pandemic.

Due to COVID-19, Finnair continued its pandemic-related measures in Q2 by e.g. extending the complimentary Corona Cover availability until end of August and the coverage period until end of October. The Corona Cover compensates to a great extent potential COVID-19 related costs accrued during an international trip.

Further, the IATA Travel Pass trial project was kicked off in June, and the trial will commence in July on Finnair's Helsinki–London route. It is a part of the digital health pass solution, which has the aim of enabling a seamless airport experience.

In Q2, Finnair continued ticket type renewals and e.g. introduced a completely new Business Light ticket in June. The renewals bring customers more choice and flexibility.

During Q2, the average monthly number of unique Finnair website visitors totalled only 0.8 million (0.6) due to the COVID-19 impact. Similarly, the number of active users of the Finnair mobile application decreased by 81.9 per cent to 251,000 from Q2 2020. Direct sales in Finnair's digital channels increased to 56.0 per cent (43.0) of all tickets sold.

## SUSTAINABILITY

Sustainability is an essential part of Finnair, and the company's sustainability targets will remain unchanged despite the COVID-19 pandemic.

Finnair's long-term goal is carbon neutrality by 2045, with a 50% reduction in net emissions in 2025 compared to the 2019 level. Reaching these objectives requires a comprehensive range of different measures, many of which involve a wide-ranging cooperation with governmental bodies and other stakeholders within the industry. As a priority, Finnair strives to reduce the direct emissions of its operations, i.e. reducing actual emissions whenever reasonably possible. Global climate challenge requires long-term planning, and in the short-term, the company will have to rely on economic measures relatively more before it can, in the longer term, take advantage of the improvements in emissions efficiency of new technologies.

Due to the COVID-19 impact, Finnair has placed particular emphasis on its social responsibilities by offering extensive and active support to its employees who have been, or will be, laid off. The company has introduced a NEXT programme, which supports the re-employment of those leaving the company. The programme consists e.g. of personalised plans to move forward in work life, a wide range of training options, career coaching, services and content that support coping and well-being, support from the TE Office and support for those interested in entrepreneurship.

Once Finnair returns to the path of growth, it wants to be an even more sustainable company. As a result, two sustainability performance indicators, fuel efficiency and work safety, were included in the short-term incentive programme, thus, making sustainability a common target.

## CULTURE AND WAYS OF WORKING

The strategy will be implemented by engaging all Finnair personnel and, thus, the strategy will be closely linked to everyday work and targets. The strategy emphasises genuine collaboration, target-oriented leadership and utilising new working methods such as lean and agile. These measures are emphasised in the pandemic but also during the future years as the number of employees has decreased as a result of the COVID-19 impact and, therefore, new, more effective ways of working as well as extensive and cross-organisational collaboration are necessary.

In 2020, Finnair announced a long-term incentive programme for those personnel groups with which it agreed on permanent cost savings that support Finnair's recovery during the rebuild period. The incentive programme started during 2020 and will end in the third quarter of 2023.

Finnair employed an average of 5,612 (6,686) people in Q2 2021, which is 16.1 per cent less than in the comparison period. The number of employees decreased during Q2 by 190 or 3.3 per cent, totalling 5,538 at the end of June (6,635). In total, 23 new persons were hired at Finnair in Q2 2021. The attrition rate for the last 12 months was 10.1 per cent (6.9) which is higher than in the comparison period due to temporary layoffs and, thus, lower number of active employees. The number of absences due to illness was 1.9 per cent (3.7) in Q2.

## Sustainability and corporate responsibility

Economic, social and environmental aspects have for a long time been integral to Finnair's overall business strategy and operations. Finnair is a responsible global citizen and responds to its stakeholders' needs, including those concerned with corporate sustainability. The strength in sustainability is important in order to stay relevant and to be able to run a long-lasting and successful business. As certain global challenges become more difficult to address, companies also need to step up and actively contribute to the United Nations Sustainable Development Goals (SDG).

The company has identified six SDGs where it is expected to act and can make a significant impact.

- SDG 5: Gender equality
- SDG 9: Industry, innovation and infrastructure
- SDG 12: Responsible consumption and production
- SDG 13: Climate action
- SDG 16: Peace, justice and strong institutions
- SDG 17: Partnerships for the goals

The biggest expectations towards Finnair are on reducing the CO<sub>2</sub> emissions of flights. Finnair is committed to the sector's common goal of carbon-neutral growth from 2020 onwards but sees this commitment as only a starting point. Finnair commits to becoming carbon neutral by 2045, with an interim goal of reducing the CO<sub>2</sub> net emissions by 50% in 2025. This is a challenging target, but Finnair considers it important for the future of the company and a means to challenge the industry as a whole even further.

Finnair's sustainability is reflected in its strategy and vision, as well as its values of commitment to care, simplicity, courage and working together. Its sustainability strategy is embedded into the group strategy, brand, operations and product development. The strategy measures contribute to cost containment and risk mitigation as well as value creation.

Finnair's ethical business principles are outlined in its Code of Conduct. The Code applies to all Finnair personnel and all locations. Finnair requires that its suppliers comply with ethical standards essentially similar to those which Finnair complies with in its own operations. Finnair's Supplier Code of Conduct provides clear principles to ensure ethical purchasing, including zero tolerance for corruption.

Safety has the highest priority in Finnair operations. Finnair is committed to implementing, maintaining and constantly developing strategies and processes to ensure that all its aviation activities take place with an appropriate allocation of organisational resources. This is to achieve the highest level of safety performance and compliance with the regulatory requirements while delivering our services.

The key performance indicators for corporate sustainability are presented in the Key Performance Indicators table of this interim report.

## Changes in company management

During H1, there were no changes in the company's management.

## Share price development and trading

Finnair's market capitalisation was 979.0 million euros at the end of June (31 Dec 2020: 1,066.1). The closing price of the share on 30 June 2021 was 0.70 euros (31 Dec 2020: 0.76 euros). During January–June, the highest price for the Finnair Plc share on the Nasdaq Helsinki was 0.81 euros, the lowest price 0.59 euros and the average price 0.70 euros. Some 664.1 million company shares, with a total value of 466.3 million euros, were traded on the Nasdaq Helsinki exchange.

The number of Finnair shares recorded in the Trade Register was 1,407,401,265 at the end of the period. The Finnish state owned 55.9 per cent (31 Dec 2020: 55.9) of Finnair's shares, while 5.5 per cent (31 Dec 2020: 7.4) were held by foreign investors or in the name of a nominee at the end of the period.

## Own shares

On 31 December 2020, Finnair held a total of 170,660 own shares, representing 0.01 per cent of the total number of shares and votes.

The Board of Directors of Finnair exercised the authorisation granted by the 2020 AGM to acquire own shares. Finnair completed the repurchase of own shares on 22 February 2021, which started on 19 February 2021. During that time, Finnair acquired a total of 1,800,000 own shares for an average price of 0.64 euros per share. The shares were acquired in public trading on Nasdaq Helsinki Ltd. at the market price prevailing at the time of purchase. The repurchased shares were acquired based on the authorisation given by the Annual General Meeting on 29 May 2020 and shall be used as a part of the Company's incentive programmes.

Following the repurchase, Finnair Plc held a total of 1,970,660 own shares, corresponding to 0.14 per cent of the total number of shares and votes.

In February, Finnair transferred, using the authorisation granted by the AGM 2020, a total of 496,564 own shares as incentives to the participants of the FlyShare employee share savings plan. It also transferred 36,903 own shares as a reward to the key personnel included in Finnair's share-based incentive scheme 2018–2020 in March.

On 30 June 2021, Finnair held a total of 1,437,193 own shares (30 Jun 2020: 209,600), representing 0.10 per cent (0.16) of the total number of shares and votes.

## Effective authorisations granted by the Annual General Meeting 2021

Finnair's Annual General Meeting was held in Vantaa on 17 March 2021 under special arrangements due to the COVID-19 pandemic.

The AGM authorised the Board of Directors to decide on the repurchase of the company's own shares and/or on the acceptance as pledge and on the issuance of shares (concerns both the issuance of new shares as well as the transfer of treasury shares). The authorisation shall not exceed 50,000,000 shares, which corresponds to approximately 3.6 per cent of all the shares in the company. The authorisations are effective for a period of 18 months from the resolution of the AGM.

The AGM also authorised the Board of Directors to decide on donations up to an aggregate maximum of EUR 250,000 for charitable or corresponding purposes. The authorisation is effective until the next Annual General Meeting.

The resolutions of the AGM are available in full on the company's website <https://investors.finnair.com/en/governance/general-meetings/agm-2021>.

## Significant near-term risks and uncertainties

Aviation is an industry that is sensitive to global economic cycles and reacts quickly to external disruptions, seasonal variations and economic trends, as the global COVID-19 pandemic starting in Q1 2020 has demonstrated. In the implementation of its strategy, Finnair is faced with various risks and opportunities. Finnair has a comprehensive risk management process to ensure that risks are identified and mitigated as much as possible, although many risks are not within the company's full control.

The risks and uncertainties described below are considered as potentially having a significant impact on Finnair's business, financial result and future outlook within the next 12 months. This list is not intended to be exhaustive.

Uncertainties related to the recovery of air traffic pose a risk to Finnair's revenue development. The key factors affecting revenue and operating loss, that Finnair can affect, are operating cost adjustments and the ability to respond to changes in demand. Factors beyond Finnair's control are mainly related to the duration of the COVID-19 pandemic, and the measures to fight the pandemic, as well as the recovery of air traffic and demand. Other general risk factors in the industry and business, such as the fluctuation in prices of jet fuel, fluctuation in demand, currency exchange fluctuations as well as regulatory and tax changes are also beyond Finnair's control.

Exceptional variations in the fuel price (including the impact of currencies and hedging) might affect capacity in Finnair's main markets. This, together with changes in ticket prices, pose a risk to Finnair's revenue development, as do sudden changes in the foreign exchange rates and slowing growth in demand. Generally, Finnair aims to pass exceptional variations in the fuel price to customers via ticket prices, however, the market conditions prevailing from time to time may not allow this.

Capacity increases and product improvements among Finnair's existing or new competitors may have an impact on the demand for, and yield of, Finnair's services. In addition, joint operations involving closer cooperation than airline alliances and joint businesses are expected to develop further. Industry consolidation could have a significant impact on the competitor landscape. Introduction of new digital distribution technologies and channels in Finnair's distribution strategy, including transition towards differentiation of fare content and availability between the channels, involves implementation and commercial risks.

The aviation industry is affected by a number of regulatory trends. Estimating the impacts of the regulatory changes on airlines' operational activities and/or costs in advance is difficult. Examples of such regulatory trends include regulation related to emissions trading, noise regulation and other environmental regulation, as well as regulations on privacy and consumer protection. Due to the extraordinary circumstances caused by the

COVID-19 pandemic, uncertainties related to agreements and authority policies as well as interpretation and implementation of legislation, such as approval of state aid, may increase. This may increase the likelihood of litigation processes.

Geopolitical uncertainty, the threat of trade wars, the threat of terrorism, cyber-attacks and pandemic risks (such as COVID-19) as well as other potential external disruptions may, if they materialise, significantly affect the demand for air travel and Finnair's operations. The COVID-19 pandemic had a significant negative impact on Finnair's operations in 2020 and the negative impact is continuing in 2021. A prolonged COVID-19 pandemic would result in a deterioration in Finnair's cash funds, although the company has already acted to mitigate this risk by introducing a funding package consisting of a 600-million-euro premium pension loan, refinancing of the 200-million-euro hybrid bond, undrawn 175-million-euro revolving credit facility as well as e.g. sale and leaseback arrangements and export credit agency financing of aircraft. In case of a prolonged pandemic, it will also reduce the company's equity significantly. Further, prolonged unprofitability will increase the risk of fleet and other fixed asset impairments. As a result, Finnair has an ongoing, significant cost adjustment programme (it targets c. 200-million-euro permanent cost base decline by 2022, based on 2019 operational volumes), including e.g. renegotiating of vendor agreements. Further, the company was forced to reduce 600 employees globally. Along with these actions, Finnair executed a 512-million-euro rights offering to strengthen the equity and cash funds in the summer of 2020. In Q1, Finnair and the State of Finland signed an agreement on an unsecured hybrid loan of up to 400 million euros in Q1. Of this credit limit, approximately 350 million euros can be used by Finnair based on the state aid decision made by the EU Commission in March. Finnair can access the funds, if its cash or equity position would drop below the limits defined in the facility's terms and conditions. The remaining approximately 50-million-euro share will be brought to approval by the EU Commission at a later stage. In May, Finnair partly refinanced its 200-million-euro senior unsecured bond maturing in March 2022 by issuing a new senior unsecured bond totalling 400 million euros and maturing in May 2025. The company has executed these measures to better ensure that it will weather a prolonged pandemic and the resulting impacts within the next 12 months.

In a changing aviation business environment, it is difficult to predict the impact the COVID-19 will have on airline market access and traffic right opportunities in general. Potentially increasing protectionism in the political environment may have an adverse impact on the market access required for the implementation of Finnair's strategy. At the same time, it is also possible that connectivity needs may increase in some countries, leading to increasing market access opportunities and new traffic rights.

Finnair's risk management and risks related to the company's operations are described in more detail on the company's website at <https://investors.finnair.com/en/governance/risk-management>.

## **Seasonal variation and sensitivities in business operations**

Due to the seasonality of the airline business, the Group's revenue and result are, in a normal situation, generally at their lowest in the first quarter and at their highest in the third quarter of the year. The growing proportional share of Asian traffic increases seasonal fluctuation due to destination-specific seasons in Asian leisure and business travel.

In addition to operational activities and market conditions, the fuel price development has a key impact on Finnair's result, as fuel costs are the company's most significant variable expense item. Finnair's foreign exchange risk arises primarily from fuel and aircraft purchases, divestments of aircraft, aircraft lease payments, aircraft maintenance, overflight royalties and foreign currency revenue. Significant dollar-denominated expense items are fuel costs and aircraft lease payments. The largest investments, namely the acquisition of aircraft and their spare parts, are also mainly denominated in US dollars. The most significant income currencies after the euro are the Japanese yen, the Chinese yuan, the US dollar, the South Korean won and the Swedish krona.

The company hedges its currency, interest rate and jet fuel exposure using a variety of derivative instruments, such as forward contracts, swaps and options, in compliance with the risk management policy approved annually by the Board of Directors. Under normal circumstances, fuel purchases are hedged for 24 months forward on a rolling basis, and the degree of hedging decreases towards the end of the hedging period. The higher and lower limits of the degree of hedging would normally be 90 and 60 per cent for the following six months but due to the uncertainty caused by COVID-19, Finnair has temporarily changed the lower limit from 60 per cent to 0 per cent during the hedging period. Currently, Finnair has hedged its fuel purchases for the next 9 months.

Sensitivities in business operations, impact on comparable operating profit (rolling 12 months from date of financial statements)		1 percentage (point) change

\* Hedging ratio and sensitivity analysis for USD basket, which consists of net cash flows in USD and HKD. The sensitivity analysis assumes that the correlation of the Hong Kong dollar with the US dollar is strong.

## HEDGING OF FOREIGN CURRENCY EXPOSURE IN BALANCE SHEET

Due to the introduction of IFRS 16 in 2019, Finnair's asset-related foreign currency exposure increased with the recognition of the present value of qualifying operating lease liabilities in the balance sheet as right-of-use assets. Unrealised foreign exchange losses/gains caused by the translation of the USD denominated liability will have an impact on Finnair's net result. In the future, the effect and amount of the foreign currency exchange could be positive or negative, depending on the USD-rate at the closing date. Finnair has mitigated the foreign exchange volatility introduced by this difference by using derivatives as well as natural hedges where possible. The annual effect in net result going forward is dependent on the size of the qualifying operating lease portfolio, the duration of the leases and hedging ratio. At the end of June 2021, the hedging ratio of USD denominated aircraft lease payments and liabilities was approximately 60 per cent.

## Events after the financial period

Finnair announced on 9 July 2021 that it opens non-stop routes from Stockholm to Miami as well as to Bangkok and Phuket for the winter season 2021–2022. The routes will be operated with Airbus A350 aircraft. The new flights will strengthen Finnair's offering in the Swedish market and create work for c. 270 persons.

On 15 July 2021, Finnair announced that it targets c. 200-million-euro permanent, annual cost base reductions by 2022, based on 2019 operational volumes. The previous target was c. 170 million euros. The company will not report on the cost savings programme's progress anymore, but it will, however, continue to seek further reductions in all cost categories.

## Financial reporting in 2021

The publication dates of Finnair's financial reports in 2021 are the following:

- Interim Report for January–September 2021 on Tuesday 26 October 2021

FINNAIR PLC  
Board of Directors

## Briefings

Finnair will hold a results press conference (in Finnish) on 15 July 2021 at 11:00 a.m. via a live webcast: <https://finnairgroup.videosync.fi/2021-0715-press>.

An English-language telephone conference and webcast will begin at 1:00 p.m. Finnish time. The conference may be attended by dialling your local access number +358 (0)9 8171 0310 (Finland), 08 5664 2651 (Sweden), 033 3300 0804 (UK) or +44 (0)33 3300 0804 (all other countries). The confirmation code is 53224833#. To join the live webcast, please register at: <https://finnairgroup.videosync.fi/2021-q2>.

## For further information, please contact:

Chief Financial Officer **Mika Stirkkinen**, tel. +358 9 818 4960, [mika.stirkkinen@finnair.com](mailto:mika.stirkkinen@finnair.com)

Director, Investor Relations **Erkka Salonen**, tel. +358 9 818 5101, [erkka.salonen@finnair.com](mailto:erkka.salonen@finnair.com)

## PERFORMANCE INDICATORS CLASSIFIED AS ALTERNATIVE PERFORMANCE MEASURES

Finnair uses alternative performance measures (APM) referred to in the European Securities Markets Authority (ESMA) guidelines to describe its operational and financial performance in order to enhance comparability between financial periods and to enable better comparability relative to its industry peers. The alternative performance measures do not replace IFRS indicators.

Alternative performance measures	Calculation	Reason to use the measure
Items affecting comparability	Unrealized changes in foreign currencies of fleet overhaul provisions + Fair value changes of derivatives where hedge accounting is not applied + Sales gains and losses on aircraft and other transactions + Changes in defined benefit pension plans + Restructuring costs	Component used in calculating comparable operating result.
Comparable operating result	Operating result - Items affecting comparability	Comparable operating result is presented to better reflect the Group's business performance when comparing results to previous periods.
Comparable operating result, % of revenue	Comparable operating result / Revenue x 100	Comparable operating result is presented to better reflect the Group's business performance when comparing results to previous periods.
Revenue at 2018/2019 constant currency	Revenue + Currency impact adjustment at 2018/2019 currency	Component used in calculating comparable operating result at constant currency and fuel price and RASK at constant currency. All changes in currency levels and hedging results since 2018/2019 are excluded from the measurement.
Costs at 2018/2019 constant currency and fuel price	Other operating income + Operating expenses included in comparable operating result + Currency and fuel price impact adjustment at 2018/2019 currency and price	Component used in calculating comparable operating result at constant currency and fuel price and CASK at constant currency and fuel price. All changes in fuel price, currency levels and hedging results since 2018/2019 are excluded from the measurement.
Comparable operating result at 2018/2019 constant currency and fuel price	Revenue at 2018/2019 constant currency + Costs at 2018/2019 constant currency and fuel price	Comparable operating result at constant currency and fuel price aims to provide a comparative, currency and fuel price neutral measurement for comparable operating result. All changes in fuel price, currency levels and hedging results since 2018/2019 are excluded from the measurement.
RASK at 2018/2019 constant currency	Revenue at 2018/2019 constant currency / Available seat kilometres (ASK)	Unit revenue (RASK) at constant currency aims to provide a comparative, currency neutral measurement for unit revenues. All changes in currency levels and hedging results since 2018/2019 are excluded from the measurement.
CASK at 2018/2019 constant currency and fuel price	Costs at 2018/2019 constant currency and fuel price / Available seat kilometres (ASK)	Unit cost (CASK) at constant currency and fuel price aims to provide a comparative, currency and fuel price neutral measurement for unit costs. All changes in fuel price, currency levels and hedging results since 2018/2019 are excluded from the measurement.
Comparable EBITDA	Comparable operating result + Depreciation and impairment	Comparable EBITDA is presented to better reflect the Group's business performance when comparing results to previous periods. Comparable EBITDA is a common measure in airline business which aims to reflect comparable operating result excluding capital cost.
Comparable EBITDA, % of revenue	Comparable EBITDA / Revenue x 100	Comparable EBITDA is presented to better reflect the Group's business performance when comparing results to previous periods. Comparable EBITDA is a common measure in airline business which aims to reflect comparable operating result excluding capital cost.

Equity ratio, %	Equity total / Equity and liabilities total x 100	Equity ratio provides information on the financial leverage used by the Group to fund its assets.
Adjusted interest-bearing liabilities	Lease liabilities + Other interest-bearing liabilities + Cross currency interest rate swaps in derivative financial instruments	Component used in calculating gearing.
Cash funds	Cash and cash equivalents + Other financial assets	Component used in calculating gearing. Cash funds represent the total amount of financial assets that are available for use within short notice. Therefore, cash funds provide the true and fair view of the Group's financial position.
Interest-bearing net debt	Adjusted interest-bearing liabilities - Cash funds	Interest-bearing net debt provides view of the Group's total external debt financing.
Gearing, %	Interest-bearing net debt / Equity total x 100	Gearing provides view of the level of the Group's indebtedness.
Interest-bearing net debt / Comparable EBITDA, LTM	Interest-bearing net debt / Comparable EBITDA, for the last twelve months	The ratio provides information on the Group's leverage by comparing the Group's net debt to the amount of income generated before covering interest, taxes, depreciation and impairment.
Gross capital expenditure	Additions in fixed assets + New contracts in right-of-use assets + Reassessments and modifications in right-of-use assets	Gross capital expenditure provides information on the Group's capitalized investments and lease modifications.
Return on capital employed (ROCE), LTM, %	(Result before taxes + Financial expenses + Exchange rate gains and losses, for the last twelve months) / (Equity total + Lease liabilities + Other interest-bearing liabilities, average of reporting period and comparison period)	The ratio provides a view to monitor the return of capital employed.

\* Cross-currency interest rate swaps are used for hedging the currency and interest rate risk of interest-bearing loans, but hedge accounting is not applied. Changes in fair net value correlate with changes in the fair value of interest-bearing liabilities. Therefore, the fair net value of cross-currency interest rate swaps recognised in derivative assets/liabilities and reported in Note 9, is considered an interest-bearing liability in the net debt calculation.

## OTHER PERFORMANCE INDICATORS

<b>Revenue and profitability</b>	
Earnings per share (EPS), basic	(Result for the period - Hybrid bond expenses net of tax) / Average number of outstanding shares during the period
Earnings per share (EPS), diluted	(Result for the period - Hybrid bond expenses net of tax) / Average number of outstanding shares during the period taking into account the diluting effect resulting from changing into shares all potentially diluting shares
Unit revenue per available seat kilometre (RASK)	Unit revenue (RASK) represents the Group's revenue divided by available seat kilometres (ASK).
Unit revenue per revenue passenger kilometre (yield)	Passenger revenue by product divided by Revenue passenger kilometres (RPK).
Unit cost per available seat kilometre (CASK)	Unit cost (CASK) represents the Group's operational costs divided by available seat kilometres. Other operating income is deducted from operational costs.
CASK excluding fuel	(Comparable operating result - Revenue - Fuel costs) / ASK x 100
<b>Traffic</b>	
Available seat kilometres (ASK)	Total number of seats available × kilometres flown
Revenue passenger kilometres (RPK)	Number of revenue passengers × kilometres flown
Passenger load factor (PLF)	Share of revenue passenger kilometres of available seat kilometres
<b>Operational excellence</b>	
On-time performance	The share of flights arrived less than 15 minutes late
<b>Modern premium airline</b>	
Net Promoter Score (NPS)	Net Promoter Score is based on a question: "Thinking about all aspects of this journey, how likely would you be to recommend Finnair to a relative, friend or colleague?" Scale is 0-10: The share of detractors (ratings 0-6) is deducted from the share of promoters (ratings 9-10). Result is between +100 and -100.
Share of digital direct ticket sales	Share of ticket sales in Finnair's own direct channels in relation to total ticket sales for the period. Direct channels include Finnair.com, Finnair mobile app, New Distribution Capability (NDC) solutions and Finnair Holidays.
<b>Sustainability</b>	
Flight CO <sub>2</sub> emissions	CO <sub>2</sub> emissions from jet fuel consumption
<b>Culture and ways of working</b>	
Absences due to illness	Share of sickness absence hours relating to planned working hours
Lost-time injury frequency (LTIF)	The number of workplace accidents per million working hours
Attrition rate, LTM	Number of leavers on own request during the last twelve months compared to active employments on reporting date and leavers on own request during the last twelve months

\*\* Due to the change in the presentation of consolidated income statement, the presentation of net cash flow from operating activities has been clarified and the figures for the comparison period have been updated to correspond to the presentation adopted at the beginning of 2021. Sales gains and losses on aircraft and other transactions, which previously was included in items affecting comparability, is presented separately. The changes are described more detailed in the notes 2. Accounting principles and 8. Items affecting comparability and changes in the presentation of income statement and cash flow statement.

## NOTES TO THE CONSOLIDATED HALF-YEAR FINANCIAL REPORT 1 JAN - 30 JUN 2021

### 1. BASIS OF PREPARATION

This consolidated half-year financial report has been prepared in accordance with the Interim Financial Reporting standard IAS 34 and its figures are unaudited. The consolidated half-year financial report has been authorized for publication on 14th July, 2021.

### 2. ACCOUNTING PRINCIPLES

The accounting principles applied in the half-year report correspond to the accounting principles disclosed in the Consolidated Financial Statements 2020 except for the changes in the presentation of the consolidated income statement relating to items affecting comparability described below. The figures presented in this half-year report are rounded and consequently the sum of individual figures may not precisely add up to the corresponding totals stated herein. The reported key figures have been calculated using exact figures.

On 1 January 2021, Finnair has changed the presentation of its consolidated income statement in order to clarify the structure and will present the items 'Comparable EBITDA' and 'Comparable operating result' previously reported on the face of the income statement only in the notes to the financial statements. Similarly, items affecting comparability previously individually identified on the face of the income statement are included in those line items in the income statement to which they belong by their nature. Due to the change in the presentation of the income statement, the line item 'Items affecting comparability' and 'Comparable EBITDA' are no longer presented in the consolidated cash flow statement. In connection with the change in presentation, the income statement and cash flow statement for the comparison period 2020 have been adjusted accordingly to facilitate comparability between the periods. The changes are presented in more detail in Note 8. 'Items affecting comparability and changes in the presentation of the income statement and cash flow statement'. The change has no effect on the Group's reported operating result or profit for the period in the current or previous financial year. The change also has no effect on the consolidated balance sheet.

IFRS IC finalized in April 2021 its agenda decision Configuration or Customisation Costs in a Cloud Computing Arrangement (IAS 38 Intangible Assets). In this agenda decision IFRS IC considered, whether, applying IAS 38, the customer recognises an intangible asset in relation to configuration or customisation of the application software, and if an intangible asset is not recognized, how the customer accounts for the configuration or customisation costs. IFRIC agenda decisions have no effective date, so they are expected to be applied as soon as possible. As Finnair has cloud computing arrangements in place, it has started to analyse, if this agenda decision has an impact to the accounting policies applied to implementation costs in cloud computing arrangements. Finnair will undertake this analysis under the fall 2021, and the possible impacts will be implemented retrospectively in the financial statements 2021 at the latest.

### 3. CRITICAL ACCOUNTING ESTIMATES AND SOURCES OF UNCERTAINTY

The preparation of the consolidated half-year financial report requires the company's management to make estimates and assumptions that influence the levels of reported assets and liabilities as well as the revenue and expenses. The actual outcome may differ from the estimates made. The main identified items requiring the use of critical accounting estimates and assumptions include impairment testing, leasing arrangements, pension obligations, maintenance reserves of the fleet, Finnair Plus - customer loyalty program, derivatives and hedge accounting as well as deferred tax assets. In addition, the assessment of going concern is based on management estimates about the future events and developments and other information available to the management at the time of the preparation of the financial statements. The Board of Directors assessment of going concern has been described in more detail in note 4.

For the preparation of the consolidated half-year financial report, the company's management has updated its previous forecast scenarios used in the 2020 financial statements due to the prolonged impacts of the COVID-19 pandemic. The most significant changes relate to the predicted timing of the passenger demand and revenue recovery, which are now estimated to take place later. The changes do not have a material effect on the Group's assets and liabilities or revenue and expenses reported in the consolidated half-year report. The updates made to the forecast scenarios are described in more detail in Note 4. COVID-19 and the Board's assessment of Finnair as a going concern.

The main critical accounting estimates and sources of uncertainty are disclosed in more detail in the 2020 financial statements. The uncertainty caused by the COVID-19 pandemic relating to the near- and long-term development of the economy and its impact on Finnair's future operating environment remains high at the time of the preparation of the half-year financial report. Given the unpredictability of the duration and reach of the pandemic, its impact on Finnair's future profitability, financial position and cash flows may differ from the current management estimates and assumptions made.

#### 4. COVID-19 AND BOARD'S ASSESSMENT OF FINNAIR AS A GOING CONCERN

The consolidated half-year financial report for the period ending 30th June, 2021 has been prepared based on the going concern assumption. The Finnair Board of Directors has assessed the Group's ability to continue as a going concern based on the Group's ability to meet its obligations as they fall due at least 12 months after the half-year financial report is issued. The Board of Directors' assessment is based on the Group's latest business plan approved by the Board of Directors and its continuous assessment of the Group's financial situation. Due to the current uncertainty embedded in the economic environment and the difficulty in forecasting the ultimate duration and impact of the COVID-19 pandemic, the Board of Directors has considered different forecast scenarios prepared by the management that cover a period from July 2021 until December 2023. The scenarios have been sensitised to reflect differences in the expected beginning of the recovery. The main identified uncertainties and management assumptions relating to the going concern assessment are described in more detail in the consolidated financial statements 2020.

For the preparation of the consolidated half-year financial report, the company's management has updated its previous forecast scenarios used in the 2020 financial statements due to the prolonged impacts of the COVID-19 pandemic resulting in slower revenue recovery than earlier anticipated. Based on the updated forecast scenarios, the timing of the revenue recovery is estimated to take place later, with the recovery under the most likely base scenario expected to materially start from October 2021 (previous estimate in August 2021). Similarly, the previous pessimistic forecast scenario has been updated so that the recovery is expected to start materially from December 2021 onwards (previous estimate in October 2021). In the most optimistic forecast scenario, the revenue recovery is expected to start in August 2021 (previous estimate June-July 2021). Under all of the scenarios, the business is expected to return to the operational levels (measured in available seat kilometres) comparable to 2019 earliest in year 2023. Under all of the three scenarios, Finnair will be able to meet its obligations as they fall due at least 12 months after the date that the financial statements are issued.

While the continued spread of the COVID-19 and its impact on travel restrictions and passenger demand is not in the sphere of Finnair's influence, the company has continued to undertake measures to mitigate the negative impacts of the pandemic and actively adjust its operations and strengthen its financial position and funding also in 2021.

In the first quarter 2021, Finnair completed a lease arrangement relating to its next A350 aircraft delivery which will have a total positive cash effect for Finnair in excess of 100 million US dollars in the last quarter 2021. Finnair also renegotiated its covenant terms for the undrawn 175-million-euro revolving credit facility where the earlier, adjusted gearing covenant was replaced with the new covenants disclosed in more detail in the note 19. Interest-bearing debt. In addition, Finnair and the State of Finland have in March 2021 signed an agreement on a hybrid loan amounting to a maximum of 400 million euros. The arrangement is described in more detail in the note 17. State aid relating to Finnair's refinancing.

During the second quarter of 2021, Finnair issued a senior unsecured bond of 400 million euros. This is disclosed in more detail in the note 19. Interest-bearing debt. The note 19. Interest-bearing liabilities provides also information on the current maturities of the Group's interest-bearing liabilities. The Group's liquidity risk management is described in more detail in the consolidated financial statements 2020.

In addition to the above measures to ensure adequate funding and liquidity, Finnair announced on 15 July, 2021 that it will target c. 200-million-euro permanent, annual cost base reductions by 2022 (based on 2019 operational volumes). The previous cost savings target announced in April was 170 million euros.

Considering the circumstances and uncertainties mentioned in the consolidated financial statements 2020 and above, as well as the already realized and planned measures to mitigate the impacts of the COVID-19 pandemic, the Board of Directors has concluded that the assessment does not cast significant doubt on the Group's ability to continue as a going concern and that consequently, the Group continues to adopt the going concern basis of accounting in preparing the consolidated financial statements. The Board of Director's conclusion is based on the information available as at the date of the issuance of the half-year financial report and an assessment conducted based on the information assuming, that the company is able to conduct its adjusted business operations according to the plan and to maintain sufficient financing for a period of at least 12 months after the date that the half-year report is issued. The management and the Board of Directors have also considered events and developments taking place after the balance sheet date and concluded that there is no material impact on the scenarios approved by the Board of Directors and the going concern assessment of the Group.

Despite the various mitigating measures implemented by Finnair, the upcoming months will continue to be significantly affected by decreased demand for air travel resulting in lower revenues and weaker financial performance for a duration that is currently uncertain. Should future events or conditions cause the Group to be unable to continue its operations in accordance with the Board of Director's current assessment, using the going concern principle may prove to be no longer justified and the carrying values as well as the classification of the Group's assets and liabilities would have to be adjusted accordingly.

## 5. SEGMENT INFORMATION AND REVENUE

Finnair Executive Board, defined as the chief operative decision maker according to IFRS 8: Segment reporting, considers the business as one operating segment. Therefore, segment information is not reported.

Revenue has been significantly impacted by COVID-19 pandemic due to extensive route and frequency cancellations as well as strict travel restrictions in many countries worldwide.

## 8. ITEMS AFFECTING COMPARABILITY AND CHANGES IN THE PRESENTATION OF INCOME STATEMENT AND CASH FLOW STATEMENT

Finnair uses alternative performance measures in its internal reporting to the chief operative decision maker, or Finnair Executive Board. The figures are referred to in the European Securities Markets Authority (ESMA) Guidelines on Alternative Performance Measures, which Finnair uses to describe its business and financial performance development between periods. The alternative performance measures do not replace IFRS indicators, but shall be read in conjunction with key figures in accordance with IFRS financial statements.

Unrealised exchange rate differences of mainly in US dollars denominated aircraft maintenance provisions and unrealised fair value changes of derivatives where hedge accounting is not applied are excluded from comparable operating result. These exchange rate and fair value effects are included in the comparable operating result only when they will realize. In addition, gains and losses on aircraft and other transactions, certain changes in defined benefit pension plans and restructuring costs are not included in the comparable operating result.

In the tables below, 'Reported' corresponds to the presentation of consolidated income statement adopted on 1 January 2021. Items affecting comparability previously individually identified on the income statement have been included in those line items in the income statement to which they belong by their nature. 'Comparable' corresponds to the presentation of consolidated income statement previously used, which presented items affecting comparability, 'Comparable EBITDA' and 'Comparable operating result'.

EUR in millions	Q2 2021			Q2 2020

## 9. MANAGEMENT OF FINANCIAL RISKS

No significant permanent changes have been made to the Group's risk management principles in the reporting period. However, a temporary amendment regarding hedging levels was executed in Q4 2020, which is in force until treasury policy is reviewed during 2021. Lower bound of hedging limits for jet fuel and foreign exchange were lowered to zero. This change was done to avoid a situation where Finnair would be forced to hedge even though the COVID-19 related uncertainty would still be significant. Additionally, balance sheet hedging limit was lowered to 0%, with target level remaining at 50%. Due to the COVID-19 Finnair has unwound a significant amount of fuel and foreign exchange hedges, which has been recognized in the P&L statement instead of OCI. The objectives and principles of risk management are consistent with the information presented in the Group's 2020 financial statements. The tables below present the nominal value or the amount and net fair value of derivative contracts used in Group's hedge accounting.

Derivatives, EUR in millions	30 Jun 2021		30 Jun 2020		31 Dec 2020	
	Nominal value	Fair net value	Nominal value	Fair net value	Nominal value	Fair net value
<b>Currency derivatives</b>

Items outside hedge accounting total	136,000	2.1	338,000	-54.6	336,000	-30.5
<b>Commodity derivatives total</b>	<b>273,000</b>	<b>11.3</b>	<b>950,000</b>	<b>-156.1</b>	<b>576,000</b>	<b>-44.6</b>
<b>Currency and interest rate swaps and options</b>						
Cross currency interest rate swaps	281.3	1.2	208.6	-0.4	286.0	-18.8
Items outside hedge accounting total	281.3	1.2	208.6	-0.4	286.0	-18.8
<b>Interest rate derivatives total</b>	<b>281.3</b>	<b>1.2</b>	<b>208.6</b>	<b>-0.4</b>	<b>286.0</b>	<b>-18.8</b>
<b>Derivatives total</b>		<b>17.6</b>		<b>-137.7</b>		<b>-87.2</b>

The uncertainty caused by the COVID-19 pandemic decreased the nominal amount of derivatives in jet fuel and foreign exchange in comparison to the second quarter of 2020.

## 10. FINANCIAL ASSETS AND LIABILITIES MEASURED AT FAIR VALUE

<b>Fair value hierarchy of financial assets and liabilities valued at fair value</b>			
Fair values at the end of the reporting period, EUR in millions	30 Jun 2021	Level 1	Level 2
<b>Financial assets at fair value through profit and loss</b>			
Securities held for trading	364.8	364.8	
Derivatives held for trading			
Currency and interest rate swaps and options	1.9		1.9
Currency derivatives	8.8		8.8
- of which in fair value hedge accounting	2.2		2.2
- of which in cash flow hedge accounting	3.9		3.9
Commodity derivatives	15.7		15.7
- of which in cash flow hedge accounting	9.3		9.3
<b>Total</b>	<b>391.2</b>	<b>364.8</b>	<b>26.3</b>
<b>Financial liabilities recognised at fair value through profit and loss</b>			
Derivatives held for trading			
Currency and interest rate swaps and options	0.7		0.7
Currency derivatives	3.6		3.6
- of which in cash flow hedge accounting	3.4		3.4
Commodity derivatives	4.4		4.4
- of which in cash flow hedge accounting	0.1		0.1
<b>Total</b>	<b>8.7</b>		<b>8.7</b>

During the reporting period no significant transfers took place between fair value hierarchy Levels 1 and 2.

The fair values of hierarchy Level 1 are based fully on quoted (unadjusted) prices in active markets of the same assets and liabilities.

The fair values of Level 2 instruments are, to a significant extent, based on input data other than the quoted prices included in Level 1, but still mainly based directly observable data (price) or indirectly observable data (derived from price) for the particular asset or liability.

## 11. COMPANY ACQUISITIONS AND DIVESTMENTS

There were no business acquisitions or disposals during the first half of 2021.

## 12. INCOME TAXES

The effective tax rate for Q1-Q2 2021 was -20.0% (-20.0%). Deferred tax asset 66.4 million euro have been capitalized in full for the losses during the financial year. In addition, the effect of deferred taxes relating to other comprehensive income was -13.4 million euro. Deferred tax asset at the end of reporting period was 137.7 million euro (31 Dec 2020: 84.8).

Tax receivables for the confirmed tax losses in 2020 are estimated to be approximately 141 million euro, which will expire in 2030. Finnair expects that these can be used against its future taxable results. The assessment is based on Finnair's latest management forecasts that consider different plausible scenarios relating to the start of the recovery. Forecast scenarios are described more detailed in the note 4. Covid-19 and Board's assessment of Finnair as a going concern. Finnair expects to be able to use the tax losses in advance of the 10 year expiry date under all of the forecast scenarios. This is based on both the expected future profits and tax planning methods relating to accumulated tax depreciations.

### 13. DIVIDEND PER SHARE

In accordance with the proposal of the Board of Directors, the Annual General Meeting on 17 March 2021 resolved that no dividend was paid for the year 2020.

In accordance with the proposal of the Board of Directors, the Annual General Meeting on 29 May 2020 resolved that no dividend was paid for the year 2019.

<b>Carrying amount at the end of period</b>	<b>856.4</b>	<b>823.1</b>	<b>917.5</b>

### 16. IMPAIRMENT TEST

Fleet and other non-current assets subject to depreciation, including the right-of-use assets, are stated at historical cost less accumulated depreciation and impairment loss, when applicable. The Group reviews the assets for impairment at each reporting date or whenever there is any indication of impairment. Goodwill and intangible assets with indefinite useful life are not subject to depreciation but to annual impairment review at each reporting date. An impairment loss is recognized if the recoverable amount of an asset is below its carrying amount. Recoverable amount is determined as the higher of the asset's fair value less costs to sell or its value in use. Approach to impairment testing is described in more detail in the consolidated financial statements 2020.

Finnair considers the various adverse economic and business implications relating to the COVID-19 pandemic as indications of possible impairment, and therefore, impairment test has been carried out as at the balance sheet date. Such indicators include the unprecedented global market disruption, the negative impacts of the pandemic on the Group's own operating environment as well as the impact of the currently extremely low passenger demand on the Group's financial performance and low capacity utilization rates. The impairment review is carried out at the level of a cash generating unit ('CGU'). Finnair is a network carrier with highly integrated fleet operations and considers all its fleet and other closely related assets as one CGU. The intangible assets with indefinite useful life, including goodwill, have been identified to belong to the CGU for impairment testing purposes. As of 30 June 2021, the amount of goodwill in Finnair's balance sheet amounted to 0.5 million euro (0.5) and the other intangible assets with indefinite useful life to 1.4 million euro (1.7). Assets, that are held for sale are excluded from CGU and reviewed separately for impairment.

The cash generating unit has been tested for impairment using value in use model based on which the recoverable amount of the CGU exceeds its carrying value at the balance sheet date. The recoverable amount of the CGU as at 30 June 2021 was 2,629.6 million euro and the carrying amount of the assets 2,417.4 million euro.

The value in use measurement is based on a discounted cash flow model where the cash flow projections are based on the latest management forecast, covering a five year period. The cash flows beyond the five-year period are projected to increase in line with management's long-term growth assumptions. In order to consider the uncertainty related to COVID-19 pandemic and the future outlook, Finnair is utilizing the expected cash flow approach which is using multiple, probability-weighted cash flow projections based on three different forecast scenarios prepared by the management. As at the end of the reporting period ending 30 June 2021, the management has updated the scenarios previously used in the consolidated financial statement 2020 due to the prolonged impacts of the COVID-19-pandemic. In the base scenario, which is considered to be the most probable scenario of the three with a probability of 70%, the revenue recovery is expected to start materially in October 2021. In the optimistic scenario, the recovery is expected to start in August 2021 and in the pessimistic scenario in December 2021. The probability of the optimistic scenario is 10% and the pessimistic scenario 20%. Under all of the scenarios, the management expects the business to return to the operational levels (measured in available seat kilometers, ASK) comparable to 2019 earliest in year 2023. However, the recovery in the pessimistic scenario is expected to be clearly slower than in the other two scenarios. The operational level in 2023 under the pessimistic scenario is expected to be only around 87% of the 2019 levels, whereas in other two scenarios it is estimated to be closer to 100%. Scenarios are described in more detail in the section 4. COVID-19 and board's assessment of Finnair as a going concern.

Key assumptions used in impairment review	30 Jun 2021	31 Mar 2021	31 Dec 2020
Discount rate (post-tax, long-term weighted average cost of capital), %	7.9	8.2	8.2
Discount rate (pre-tax, long-term weighted average cost of capital), %	9.0	9.4	9.3
Long-term growth rate, %	2.4	2.4	2.4
Fuel cost range per ton (USD)	645-702	600-645	540-610

The preparation of the calculations used for impairment testing requires significant management judgement and the use of management estimates. These estimates are based on budgets and forecasts, which already inherently contain some degree of uncertainty, and the level of uncertainty is further increased due to COVID-19. Uncertainty and related management judgement are described in more detail in consolidated financial statements 2020. The main factors requiring significant management judgement are the ultimate duration of the pandemic and the speed of recovery and unit revenue development. Finnair has considered the impact of these management estimates on the impairment testing by using abovementioned forecast scenarios and expected cash flow approach in the testing. Additionally, the value in use calculation is sensitive to changes in the EBITDA margin, cost of jet fuel, terminal growth rate and changes in discount rate, which are the key assumptions used in the calculation.

The estimated business growth and EBITDA are based on management's best assessment of the speed of recovery from the current COVID-19 pandemic as well as the future market demand and environment, which are benchmarked against external information sources, such as long-term average growth estimates for industry. The discount rate used is based on the weighted average cost of capital (WACC), which reflects the market assessment of the time value of money and the risks specific in Finnair's business. The increased uncertainty related to the COVID-19 is considered through the multiple scenarios and the expected cash flow approach used in impairment testing rather than in discount rate. Fuel price is based on hedge-weighted fuel price based on forward curve, estimated fuel consumption based on planned flights and the historical data of fuel consumption for each aircraft type.

Due to increased uncertainties related to the use of key assumptions and management estimates, Finnair has prepared a sensitivity analysis to reflect how the result of impairment test would react to the changes in key assumptions. The sensitivity analysis considers changes in one assumption at the time, whereby the other assumptions are kept unchanged. The result of the sensitivity analysis reflects the sensitivity of the recoverable amount based on expected cash flow model.

Sensitivities of the key assumptions	30 Jun 2021	31 Mar 2021	31 Dec 2020
EBITDA margin%, per cent point	-0.5	-0.2	-1.0
Discount rate, per cent point	+0.4	+0.2	+0.9
Long-term growth rate, per cent point	-0.5	-0.2	-1.0
Fuel cost, per cent	+2.0	+4.0	+15.0

## 17. STATE AID RELATING TO FINNAIR'S REFINANCING

### State aid in pension premium loan and rights offering

The European Commission has concluded that the State of Finland's guarantee of Finnair's pension premium loan up to EUR 540 million, which was approved by the European Commission on 18 May 2020, and the State of Finland's participation in the rights offering are so closely linked that they must be regarded as an overall transaction that constitutes State aid within the meaning of Article 107(1) of the Treaty on the Functioning of the European Union. Under the Commission's decision, the Company has agreed to certain conditions following the offering, which include, among other things, a ban on acquisitions, restricting the Company from acquiring a stake of more than 10 per cent in competitors or other operators in the same line of business, including upstream or downstream operations for a period of three years from the offering.

As a result of the restrictions based on the Commission's decision, the remuneration of each member of Finnair's management will not go beyond the fixed part of his/her remuneration on 31 December 2019. For persons becoming members of the management on or after the rights issue, the applicable limit of the remuneration for such new member will be benchmarked to the remuneration of comparable managerial positions and areas of responsibility in Finnair applied on 31 December 2019. Finnair will not pay bonuses and other variable or comparable remuneration elements during the three fiscal years 2020-2022 to the members of the management.

Further, Finnair is committed to publishing information about the use of the aid received within 12 months from the date of the offering and thereafter periodically every 12 months, for a period of three years. In particular, this should include information on how the company's use of the aid received supports its activities in line with EU objectives and national obligations linked to the green and digital transformation, including the EU objective of climate neutrality by 2050.

### State aid in hybrid loan

Finnair and the State of Finland signed an agreement in 17 March 2021 on a hybrid loan of maximum 400 million euros to support Finnair. The decision was made by the Plenary Session of the Government on 18 February 2021. The arrangement has the approval of the EU Commission's competition authority in line with the European Union's state aid rules. Of the credit limit, approximately 350 million euros can be used by Finnair based on the state aid decision made by the Commission on 12 March 2021. Finnair is able to access the funds, if its cash or equity position would drop below the limits to be defined in the facility's terms and conditions. The remaining approximately 50-million-euro share will be brought to approval by the Commission at a later stage.

## 18. PENSION ASSETS

Pension assets were 69.8 million euro (31 December 2020: 31.8). Change in discount rate to 0.76% (31 December 2020: 0.25%) increased pension assets 21.0 million euro, net return on plan assets 16.2 million euro and the amendments to the terms of Finnair pension fund relating to curtailment of occupational disability pensions 12.9 million euro. Other service cost decreased pension assets 7.4 million euro and experience adjustments 4.8 million euro.

## 19. INTEREST-BEARING LIABILITIES

During the second quarter of 2021 Finnair issued a senior unsecured bond of EUR 400 million. The bond has a 4-year maturity with fixed annual interest rate of 4.250 per cent. Simultaneously Finnair announced a tender offer for the holders of the existing senior unsecured bond of EUR 200 million due in 2022 to tender their holdings against cash. The aggregate principal amount of the existing senior secured bond validly tendered by the holders for purchase pursuant to the tender offer was EUR 101 million. The tender offer of the existing senior unsecured bond accumulated EUR 1.4 million in costs. The proceeds of the offering will be used to fund the purchase of the existing senior unsecured bond due 2022 and the remaining proceeds for general corporate purposes.

Finnair has a revolving credit facility of EUR 175 million in place that has a financial covenant in it. In the first quarter of 2021 Finnair negotiated a new covenant waiver with the syndicate banks. The waiver will remove the financial covenant of adjusted gearing completely for the time being and replace it with covenants based on the measures of equity and cash funds. The new covenant levels for cash funds and shareholder's equity will be EUR 400 million. In addition, the covenant level for a separate measure 'book equity', defined as the equity within the meaning of the Finnish Companies Act but excluding any hybrid instruments and any capital loans, will be EUR 150 million. The newly negotiated terms have an additional subsequent condition in place, based on which the currently fully undrawn 175 million euro revolving credit facility maturing in January 2023 would be available to Finnair once the EU Commission's approval for the remaining 50 million euro of the hybrid loan was received. The amended covenant agreement has been signed on 31 March 2021 with an effective date of 13 April 2021 after fulfilling the requirements detailed in the waiver agreement.

Covenant, EUR in millions	Covenant limit	30 Jun 2021
Equity	400.0	684.8
Cash funds	400.0	834.3
Book equity	150.0	486.9

The existing loans are being amortized according to the loan instalment programs.

<b>Total</b>	<b>433.6</b>	<b>861.8</b>	<b>232.8</b>	<b>713.5</b>	<b>175.9</b>	<b>426.7</b>	<b>2,844.4</b>

\* The bonds maturing do not include the amortised cost of EUR 0.1 million paid in 2017 and due on 2022 and EUR 3.2 million paid in 2021 and due on 2025. Respectively, JOLCO loans do not include the amortised cost of EUR 3.2 million paid on 2016 and due on 2025. Loans from financial institutions do not include the amortised cost of EUR 0.8 million paid in 2020 and due on 2022. Therefore, the total amount of interest-bearing financial liabilities differs from the book value by the amount equal to the amortised costs.

## 20. PROVISIONS

EUR in millions	30 Jun 2021	30 Jun 2020	31 Dec 2020
<b>Aircraft maintenance provision</b>			
Provision at the beginning of period	162.8	166.3	166.3
Provision for the period	7.0	16.3	25.4
Provision used	-5.2	-5.7	-18.3
Provision reversed	-0.5	-0.4	-1.3
Provision for right-of-use assets redelivery	0.2	0.3	2.1
Unwinding of discount	0.5	0.6	0.9
Exchange rate differences	4.4	0.5	-12.2
<b>Aircraft maintenance provision total</b>	<b>169.3</b>	<b>177.9</b>	<b>162.8</b>
Of which non-current	156.5	154.0	153.6
Of which current	12.8	23.9	9.2
<b>Other provisions</b>			
Provision at the beginning of period	13.0	3.1	3.1
Provision for the period	2.5	2.9	27.2
Provision used	-7.9	-1.7	-6.7
Provision reversed	-0.7	-0.9	-10.6
<b>Other provisions total</b>	<b>7.0</b>	<b>3.4</b>	<b>13.0</b>
Of which non-current	1.6	1.2	2.2
Of which current	5.4	2.2	10.8
<b>Total</b>	<b>176.3</b>	<b>181.4</b>	<b>175.8</b>
Of which non-current	158.1	155.2	155.8
Of which current	18.1	26.1	20.0

Non-current aircraft maintenance provisions are expected to be used by 2033. Other provisions include mainly items related to restructuring actions due to COVID-19 impacts, which are expected to be used mainly by the end of 2021. Provision for the period relating to aircraft maintenance provision were significantly lower due to decreased flight operations during COVID-19 pandemic.

In balance sheet, non-current provisions and other liabilities 163.4 million euro (31 December 2020: 161.1) includes, in addition to provisions, other non-current liabilities 5.2 million euro (31 December 2020: 5.2), which mainly consists of received lease deposits.

## 21. DEFERRED INCOME AND ADVANCES RECEIVED

EUR in millions	30 Jun 2021	30 Jun 2020	31 Dec 2020
Deferred revenue on ticket sales	92.3	209.9	55.7

Advances received for tour operations	7.6	4.5	3.4
Other items	19.3	19.1	22.5
<b>Total</b>	<b>171.8</b>	<b>279.8</b>	<b>133.6</b>

## 22. CONTINGENT LIABILITIES

EUR in millions	30 Jun 2021	30 Jun 2020	31 Dec 2020
Guarantees on behalf of group undertakings	46.1	52.7	32.1
<b>Total</b>	<b>46.1</b>	<b>52.7</b>	<b>32.1</b>

Investment commitments for property, plant and equipment as at 30 June 2021 totaled EUR 349 million (31 December 2020: 429). Guarantees on behalf of group undertakings decreased during 2020 due to reduced guarantee amounts required by the Finnish Competition and Consumer Authority as a result of lower bookings in tour operations caused by the COVID-19, and they remained stable during the reporting period. Lease commitments as at 30 June 2021 including VAT obligations, short-term leases of facilities and leases of low value IT equipment, that do not qualify as IFRS 16 leases, totaled EUR 32.5 million (31 December 2020: 19.1).

Finnair has committed to a leasing arrangement of one A350 aircraft that is scheduled to be delivered to Finnair in Q2 2022. The lease period starts in Q4 2021 and the impact of the arrangement on Finnair's right-of-use assets and lease liabilities will be approximately 100 million euro.

## 23. RELATED PARTY TRANSACTIONS

Related parties of the Finnair group includes its subsidiaries, management (the Board of Directors, the President and CEO and the Executive Board), their close family members and companies controlled by them or their close family members, associated companies and joint ventures and Finnair pension fund. Related party transactions include such operations that are not eliminated in the group's consolidated financial statement.

The State of Finland which has control over Finnair owns 55.9% (31 December 2020: 55.9%) of Finnair's shares. All the transactions with other government owned companies and other related parties are on arm's length basis, and are on similar terms than transactions carried out with independent parties.

EUR in millions	Q1-Q2 2021	Q1-Q2 2020	2020

## 24. EVENTS AFTER THE REVIEW PERIOD

On 15 July 2021, Finnair announced that it targets c. 200-million-euro permanent, annual cost base reductions by 2022 based on 2019 operational volumes. The previous target was 170 million euros. The company will not report on the cost savings programme's progress anymore but it will, however, continue to seek further reductions in all cost categories.

Finnair has on 1 July 2021 sold its 49.5% share of Suomen Ilmailuopisto Oy to the city of Pori and to the Government of Finland. The transaction has no material effect on Finnair's profitability.
